

VIJILANT

Calm in the case. Clarity in the chaos.

Purpose-built case management for disaster recovery.

Disaster casework runs on spreadsheets and memory.

When a disaster strikes, thousands of survivors are triaged and tracked in Excel files, shared Google Sheets, and disconnected tools. The work that decides whether a family recovers is held together by whoever happens to remember it.

Hours lost daily

Case managers spend hours a day on documentation instead of serving survivors.

No standard triage

Severity is subjective and inconsistent. There is no shared way to say who needs what, first.

Supervisors fly blind

No real-time view of caseload health — until a case manager is already overwhelmed.

The gap is not a tools problem. It is a system problem — and no system exists.

WHY NOW

The disaster decade is already here.

23

billion-dollar disasters struck the U.S. in 2025 — the third-highest count since 1980.

2
weeks

How often a new billion-dollar disaster now strikes the United States.

90%+

probability that U.S. disaster damage from 2026–2030 exceeds \$500 billion.

This is not a market that cycles. It compounds. Every disaster is a new population of survivors for whom recovery has to work — and the tools to manage it do not exist.

One platform. Every case. Everyone on the same page.

Vijilant replaces the spreadsheet-and-email infrastructure of disaster casework with a single, mobile-first, HIPAA-compliant platform — purpose-built for how disaster case managers actually work, and how supervisors actually need to see.

Structured case files

Notes, assessments, follow-ups, aid applications, and survivor messaging in one record.

Recovery, measured

A standardized 12-section assessment scores recovery from 0 to 1,000, with impact tracked across five domains.

Visibility as architecture

Org-wide oversight is built in — no screen-sharing, no status meetings, no surprises.

From intake to recovery, in one workflow.

HIPAA-compliant from the ground up — RLS, audit logging, BAA gate at the database level, AES-256-encrypted offline cache, 30-minute idle logoff.

Live today. Running on a real caseload.

Hundreds of Eaton Fire survivors in active case management today.

In production

at The Legacy Land Project, the Pasadena nonprofit leading Eaton Fire recovery.

Built case by case

inside an active wildfire recovery, not researched from the outside.

BUILD VELOCITY · LAST 14 DAYS

Stage 7 unified inbox · Stage 8 self-serve signup + billing + in-app BAA · Stage 9 AI Call Notation (bilingual) · Spanish i18n · 5 architecture cleanup PRs · Full architecture map at hwormely.github.io/vijilant-brief/

Built by someone who does the work.

FOUNDER

Horace Wormely

Disaster Care Manager at The Legacy Land Project, the Pasadena nonprofit leading Eaton Fire recovery. Vijilant was designed inside his own active caseload.

Purpose-built

Not adapted from a generic CRM. Designed inside an active disaster recovery program.

Mobile-first

Works in the field, at the shelter, wherever the case manager is. No laptop required.

Supervisor-ready

Org-wide visibility from day one. It is the architecture, not an add-on.

MARKET

**A market growing on two axes —
with no one at the intersection.**

\$10.1B

Crisis management software, 2026 — growing 5.9% a year on rising disaster frequency.

\$7.4B

Nonprofit case management software — the second segment Vijilant sits across.

~\$360M

Serviceable market: U.S. orgs running dedicated disaster case management.

No platform exists for disaster case management at any price point — the category has no entry on G2, Capterra, or GetApp. Incumbents are generic tools retrofitted for disaster work. Vijilant is building the category.

BUSINESS MODEL

SaaS that scales from a single county to a state agency.

STARTER

\$299

/mo

Small local CBOs · up to 5 case managers · self-serve

PROFESSIONAL

\$799

/mo

Mid-size recovery nonprofits · up to 20 CMs · self-serve

ENTERPRISE

Custom

Large regional & national orgs · unlimited seats

GOVERNMENT

Custom

County & state agencies · outcome-based options

ADD - ONS

white-label +\$500/mo · API access +\$200/mo · priority SLA +\$300/mo

20% discount on annual prepay. The Recovery Access Program — a nonprofit discount plus sponsor-funded free seats — keeps Vijilant reachable for the orgs it exists to serve. Gross margin runs 70–80% across every tier.

FINANCIALS

A clear path to \$9M in ARR —
and profitability in Year 4.

Base case. Ending ARR by year. Source: Vijilant 5-year financial model.

Year 4

EBITDA turns positive.

Year 5

About \$2.6M EBITDA on \$7.0M revenue.

Conservative

Built bottom-up from real list prices, vendor-verified COGS, and a tier-by-tier model.

Three phases. Sequenced, not scattered.

PHASE 1

Los Angeles Basin

The Legacy Land Project as anchor reference customer. Relationship-driven outreach to the LA County disaster-recovery network. No marketing spend.

PHASE 2

The VOAD Network

National disaster-recovery nonprofit network. Conference presence at NVOAD. The published LLP case study lands. First government conversations open.

PHASE 3

National & Government

SAM.gov and GSA Schedule. County and state emergency-management contracts. Red Cross and Salvation Army chapter networks.

Distribution is the failure mode for mission-driven software — so the paths are sequenced deliberately, one proven before the next begins.

THE ASK

\$1.5M

to fund the next 24 months.

Raised as a SAFE with a post-money valuation cap. The round funds the path to a fundable Series A milestone.

Core team

A CTO and engineers to take Vijilant from live pilot to scalable platform.

Pilot deployments

Three to five additional disaster-recovery orgs — validation of GTM.

Legal & compliance

HIPAA · SOC 2 Type I → Type II ·
customer BAA · MSA · Privacy Policy ·
NPP.

First government

SAM.gov registration and introductory
county OES conversations.

Calm in the case. Clarity in the chaos.
