

VIJILANT

**Calm in the case.
Clarity in the chaos.**

Purpose-built case management for disaster recovery.

THE PROBLEM

Disaster casework runs on spreadsheets and memory.

When a disaster strikes, thousands of survivors are triaged and tracked in Excel files, shared Google Sheets, and disconnected tools. The work that decides whether a family recovers is held together by whoever happens to remember it.

Hours lost daily

Case managers spend hours a day on documentation instead of serving survivors.

No standard triage

Severity is subjective and inconsistent. There is no shared way to say who needs what, first.

Supervisors fly blind

No real-time view of caseload health — until a case manager is already overwhelmed.

The gap is not a tools problem. It is a **system problem** — and no system exists.

WHY NOW

The disaster decade is already here.

23

billion-dollar disasters struck the U.S. in 2025 — the third-highest count since 1980.

2 weeks

How often a new billion-dollar disaster now strikes the United States.

90%+

probability that U.S. disaster damage from 2026–2030 exceeds \$500 billion.

This is not a market that cycles. It **compounds**. Every disaster is a new population of survivors for whom recovery has to work — and the tools to manage it do not exist.

THE SOLUTION

One platform. Every case. Everyone on the same page.

Vijilant replaces the spreadsheet-and-email infrastructure of disaster casework with a single, mobile-first, HIPAA-compliant platform — purpose-built for how disaster case managers actually work, and how supervisors actually need to see.

Structured case files

Notes, assessments, follow-ups, and aid applications in one record.

Recovery, measured

A standardized assessment scores recovery from 0 to 1,000, with impact tracked across five domains.

Visibility as architecture

Org-wide oversight is built in — no screen-sharing, no status meetings.

From intake to recovery, in one workflow.

01

Intake

Digital survivor questionnaire, verified by a supervisor and assigned to a case manager.

02

Assess & Triage

A 12-section clinical assessment auto-generates a Triage Tier — severity, scored consistently.

03

Recovery Plan

A Recovery Score and a personalized recovery plan, generated from the assessment.

04

Aid Automation

Application templates auto-populated from the case file. No re-keying, no lost paperwork.

05

Supervisor View

Org-wide caseload health, capacity, and score-drop alerts — in real time.

HIPAA-compliant from the ground up — audit logging and data isolation built into the architecture.

Live today. Running on a real caseload.

600+

Eaton Fire survivors in active case management today — on a path to 1,400 as the caseload grows.

— **In production** — at The Legacy Land Project, the Pasadena nonprofit leading Eaton Fire recovery.

— **Built case by case** — inside an active wildfire recovery, not researched from the outside.

The Executive Director has seen the platform and wants it — the anchor relationship is real, operational, and running on live survivor data. For a company at this stage, that is the strongest credibility signal there is.

Built by someone who does the work.

Horace Wormely — Founder

Disaster Care Manager at The Legacy Land Project, the Pasadena nonprofit leading Eaton Fire recovery. Vijilant was designed inside his own active caseload.

Every design decision in Vijilant was made by someone processing real survivor cases. Competitors adapt generic case-management software and guess at the workflow. Vijilant started from the work.

That is a moat no competitor can manufacture.

Purpose-built

Not adapted from a generic CRM. Designed inside an active disaster recovery program.

Mobile-first

Works in the field, at the shelter, wherever the case manager is. No laptop required.

Supervisor-ready

Org-wide visibility from day one. It is the architecture, not an add-on.

MARKET

**A market growing on two axes —
with no one at the intersection.**

\$10.1B

Crisis management software, 2026 — growing 5.9% a year on rising disaster frequency.

\$7.4B

Nonprofit case management software — the second segment Vijilant sits across.

~\$360M

Serviceable market: U.S. orgs running dedicated disaster case management.

No platform exists for disaster case management at any price point — the category has no entry on G2, Capterra, or GetApp. Incumbents are generic tools retrofitted for disaster work. Vijilant is building the category.

SaaS that scales from a single county to a state agency.

STARTER \$299/mo Small local CBOs · up to 5 case managers	PROFESSIONAL \$799/mo Mid-size recovery nonprofits · up to 20 CMs	ENTERPRISE \$3,000/mo Large regional & national orgs · unlimited	GOVERNMENT \$12,000/mo County & state agencies · outcome-based options
---	---	--	--

20% discount on annual prepay. The Recovery Access Program — a nonprofit discount plus sponsor-funded free seats — keeps Vijilant reachable for the orgs it exists to serve, funded outside the P&L.

A clear path to \$9M in ARR —
and profitability in Year 4.

Base case. Ending ARR by year. Source: Vijilant 5-year financial model.

Year 4

EBITDA turns positive.

Year 5

About \$2.6M in EBITDA on \$7.0M of revenue.

Conservative

Built bottom-up from real list prices and a tier-by-tier model.

Three phases. Sequenced, not scattered.

PHASE 1

Los Angeles Basin

The Legacy Land Project as anchor reference customer. Relationship-driven outreach to the LA County disaster-recovery network. No marketing spend.

PHASE 2

The VOAD Network

National disaster-recovery nonprofit network. Conference presence at NVOAD. A published LLP case study. First government conversations open.

PHASE 3

National & Government

SAM.gov and GSA Schedule. County and state emergency-management contracts. Red Cross and Salvation Army chapter networks.

Distribution is the failure mode for mission-driven software — so the paths are sequenced deliberately, one proven before the next begins.

THE ASK

\$1.5M to fund the next 24 months.

Raised as a SAFE with a post-money valuation cap. The round funds the path to a fundable Series A milestone.

Core team

A CTO and engineers to take Vijilant from live pilot to scalable platform.

Pilot deployments

Three to five additional disaster-recovery orgs — validation of go-to-market.

Legal & compliance

HIPAA program, the customer BAA, the trademark, and contract templates.

First government engagement

SAM.gov registration and introductory county OES conversations.

Calm in the case. Clarity in the chaos.
