

THE OPPORTUNITY

When a disaster strikes, thousands of survivors are triaged and tracked in spreadsheets, shared documents, and disconnected tools. Case managers lose hours a day to documentation, supervisors have no real-time view of caseload health, and severity is a guess. No platform was built for this work — and the work only grows. The U.S. saw 23 billion-dollar disasters in 2025, and a University of Chicago study puts a 90%+ probability that U.S. disaster damage from 2026–2030 exceeds \$500 billion.

THE PRODUCT

Vijilant is the first end-to-end platform built for disaster case management. One mobile-first, HIPAA-compliant system carries a survivor from digital intake through a 12-section clinical assessment that auto-generates a Triage Tier and Recovery Score, a personalized recovery plan, automated aid applications, and a real-time supervisor dashboard. It replaces the spreadsheet-and-email infrastructure of disaster casework — and it was designed inside an active wildfire recovery, by the case manager carrying the load.

TRACTION

Live in production at The Legacy Land Project in Pasadena — 600+ Eaton Fire survivors in active case management today, on a path to 1,400 as the caseload grows. The Executive Director has seen the platform and wants it. Vijilant was not researched from the outside; it was built case by case, by a working Disaster Care Manager.

MARKET & MODEL

Vijilant sits at the intersection of two growing markets — crisis management software (\$10.1B) and nonprofit case management software (\$7.4B) — with no incumbent occupying it. SaaS pricing runs from \$299/mo for small nonprofits to \$12,000/mo for government agencies, with a Recovery Access Program keeping the platform reachable for resource-constrained orgs. The model reaches profitability in Year 4 and roughly \$9M in ARR by Year 5.

THE ASK

\$1.5M seed, raised as a SAFE with a post-money valuation cap. The round funds 24 months — a core engineering team, three to five additional pilot deployments, the HIPAA and legal buildout, and the first government procurement engagement — to a fundable Series A milestone.
