

VIJILANT

CASE STUDY · QUALITATIVE

How The Legacy Land Project runs Eaton Fire recovery on Vijilant.

ORGANIZATION

The Legacy Land Project

PLATFORM

Vijilant — live in production

LOCATION

Pasadena, California

CASELOAD

**Hundreds of Eaton Fire survivors
in active case management**

THE CHALLENGE

Disaster case management is a paper-and-spreadsheet discipline. When the Eaton Fire hit, LLP — like every disaster recovery organization — ran its caseload on spreadsheets, shared documents, and disconnected tools. Case managers spent hours a day on documentation. Severity was triaged by instinct. Supervisors had no real-time view of caseload health. Aid applications were tracked by hand. Every staff change rebuilt institutional memory from scratch.

THE SOLUTION

LLP adopted Vijilant — a case management platform purpose-built for disaster recovery, designed by a working Disaster Care Manager on LLP's own staff. Vijilant carries each survivor through one connected workflow: digital intake and supervisor verification; a twelve-section clinical assessment that generates a Triage Tier and a 0–1,000 Recovery Score; an auto-generated recovery plan; aid application automation; a curated resource directory; in-app messaging between case manager and survivor; AI-drafted bilingual case notes from recorded conversations; and a real-time supervisor dashboard. It is HIPAA-compliant by architecture, with audit logging, row-level security on every PHI table, and a database-level BAA gate built in. Because Vijilant was built inside an active recovery rather than adapted from generic software, it matched how LLP's case managers already work — instead of forcing them to work around it.

INSIDE THE PRODUCT

The case manager's dashboard

Today's tasks, caseload health, and priority follow-ups — at a glance.

The Recovery Assessment

A 0–1,000 Recovery Score, with impact tracked across five domains.

THE CUTOVER

From a competitor platform to a purpose-built one.

Before Vijilant, LLP ran its caseload on HOLD Dena — Quality Works' generic recovery platform, retrofitted for disaster casework. The team contended with persistent friction: login failures, a deletion bug that destroyed case notes, in-platform email that failed silently, and a data-entry layer that slowed every case manager every day. LLP's founder had stepped into the platform's vendor relationship as Tech Systems Liaison to push fixes from inside — and that vantage shaped Vijilant. Every friction point in HOLD Dena became a feature decision in Vijilant.

LLP's migration off HOLD Dena onto Vijilant is now underway: a 21-day, four-phase plan covering data export, staging-mirror dry-runs, a 2-survivor pilot, training sessions, and final cutover. Audit history preserved; HOLD Dena moves to read-only after Day 0; no survivor data is lost in transit.

RECENT CAPABILITY ADDITIONS · LAST 14 DAYS

Stage 7 Messaging

Unified inbox between case manager and survivor — and within the org. Real-time. One surface for everything.

Stage 9 AI Call Notation

Consented recordings transcribed and drafted as bilingual EN+ES case notes by Claude. The CM reviews + approves.

Spanish i18n

Survivor portal localized into Spanish. Foundation laid for additional languages.

THE TRANSFORMATION

BEFORE VIJILANT

A case manager's knowledge of a survivor lived in a spreadsheet row, an email thread, and their own memory. A supervisor learned a caseload was overloaded only when a case manager was already past capacity. A new hire started from nothing.

WITH VIJILANT

Every survivor has one structured record — intake, assessment, notes, follow-ups, applications, messages, and documents in a single place. Severity is scored consistently by the assessment, not guessed. Recovery is measured as a single Recovery Score from 0 to 1,000. Supervisors see caseload health in real time, before it becomes a crisis. When staff change, the work continues — the platform holds the institutional memory a spreadsheet never could.

The change is not that the work became easy. Disaster recovery is hard, and it will stay hard. The change is that a case manager's hours now go to survivors instead of paperwork — and that the organization can finally see, and steady, its own capacity.

WHAT'S NEXT

LLP's Eaton Fire recovery continues, and its caseload keeps growing. Vijilant grows with it. And the platform proven inside LLP is now being prepared for the disaster recovery organizations that will face the same problem after the next fire, flood, or storm.

The Eaton Fire recovery is the proof. The need is national.
